QUALITY IN THE 21ST CENTURY

Q21 Many new PCA clients have asked if the Quality Improvement Process works in the real world. Longtime clients say they wonder how other organizations are handling similar problems and wish they could "compare notes." In the video series, *Quality in the 21st Century (Q21)*, moderated by PCA's Director of Systems Integrity Phylis Crosby, PCA clients answer questions and explain how they have "personalized" the process in their companies.

A professional film crew documented how the process works for both manufacturing and service clients, from Fortune 500 companies to small private firms. At the end of each video, Philip B. Crosby, chairman and creative director, shares his thoughts in a candid discussion.

Q21 is a positive awareness tool to use for employees. The video also serves as a convenient introduction to the quality process for customers and suppliers. With three new volumes in stock, now is the time to order.
